Paper 1: Peer Review Instructions

Last updated on September 14, 2026

Due Dates

1. **October 2**: Peer review feedback due. If this submission is more than 48 hours late, the resulting late penalty will be applied **to the final grade** for the entire project.
2. **October 9**: Second version of project submitted to instructor. Preliminary grades and feedback will be returned within a week.

Grading criteria

Your grade for the peer review assignment will be based only on your effort in completing a review of your partner's project. In other words, any issues you identify will not impact your partner's grade negatively. Do your best to point out anything that you feel could improve your partner's project.

Peer Review Worksheet

Please submit your responses to the following questions as a pdf to the peer review assignment on Canvas. Include the list of questions in your submission.

1. What is the main research question of this paper?
2. Briefly describe the dataset used to explore the main research question. Is the data adequately introduced and described? Are there any limitations or caveats that the author should address?
3. Describe the regression model used to answer the main research question. Is this model appropriate for the question of interest? Are there any limitations or caveats that the author should address?
4. What are the most effective components of this paper? Why?

5. Are there any sections that the author should focus on revising? Does anything seem out of order or incompletely explained?
6. Review the rubric for Paper 1. Are there any requirements that have not been met? If so, identify them here.
7. Do you have any other suggestions or comments for the author? Provide them here.
